

Tagging instructions of association categories types:

A pair of a cue word, and an association image is presented each time. Please choose the most correct tag that describes each pair, out of these three options:

- **Visually Salient Object:** The cue is one of the main visually salient objects in this specific image.

Do you see the **cue** as an object in the image? is it clearly visualized in the image, and it is one of the main objects? (If so -> visually salient object)

"Grass" is **visually salient object** in these images:

- **Visually Salient Activity:** The cue is an activity depicted in this specific image. Do you see the **cue** as an activity in this image? (If so -> visually salient activity)

"Throw" is visually salient activity in this image:

"catch" is visually salient activity in this image:

- **Visually Non-Salient:** The cue is related to something visual that is present in this particular image and not necessarily in other images with the same concept. But it is

not a visually salient object nor activity (Not **Visually Salient Object** and not **Visual Activity**).

The **cue** is visual but not salient object nor an activity? (If so -> visually non-salient)

"Grass" is visually non-salient in these images:

"Clean" is visually non-salient in this image:

- **Non Visual, Concept Related:** The cue is related to the image concept, not necessarily to this specific image.

Could you understand the **cue** with the **image concept** only? Without seeing the image? (If so -> non-visual)

"Grass" is non-visual, concept related in these images:
